For this laboratory work I chose blog.
It has pages as Home, Contacts, Hubs.
Data is static and sets on constructing model.
Main aim of laboratory work is to implement MVC pattern. I created controllers
HomeController, HubsController, HubController and ContactsController for
providing models to views and other basic stuffs.
Also I made ContactsModel, HomeModel, HubsModel which are used for manipulation
with data.
Second task of lab is to work with template, transform and two-step views.
Template view implemented in template.jsp.
Transform view in contacts.jsp.
Two-step view implemented almost in all view. All of them use template.jsp and
content view.
